Current Problems of Parking II.

Customer and Operator issues to be resolved

Insufficient supply for parking spaces

Difficult to find parking spaces

Long parking space search time

Helpless, disorderly parking

Will inevitably be punished by police

Uneven service efficiency

Serious money loss

Lack of basic data

Insufficient management experience

Lack of decision-making basis

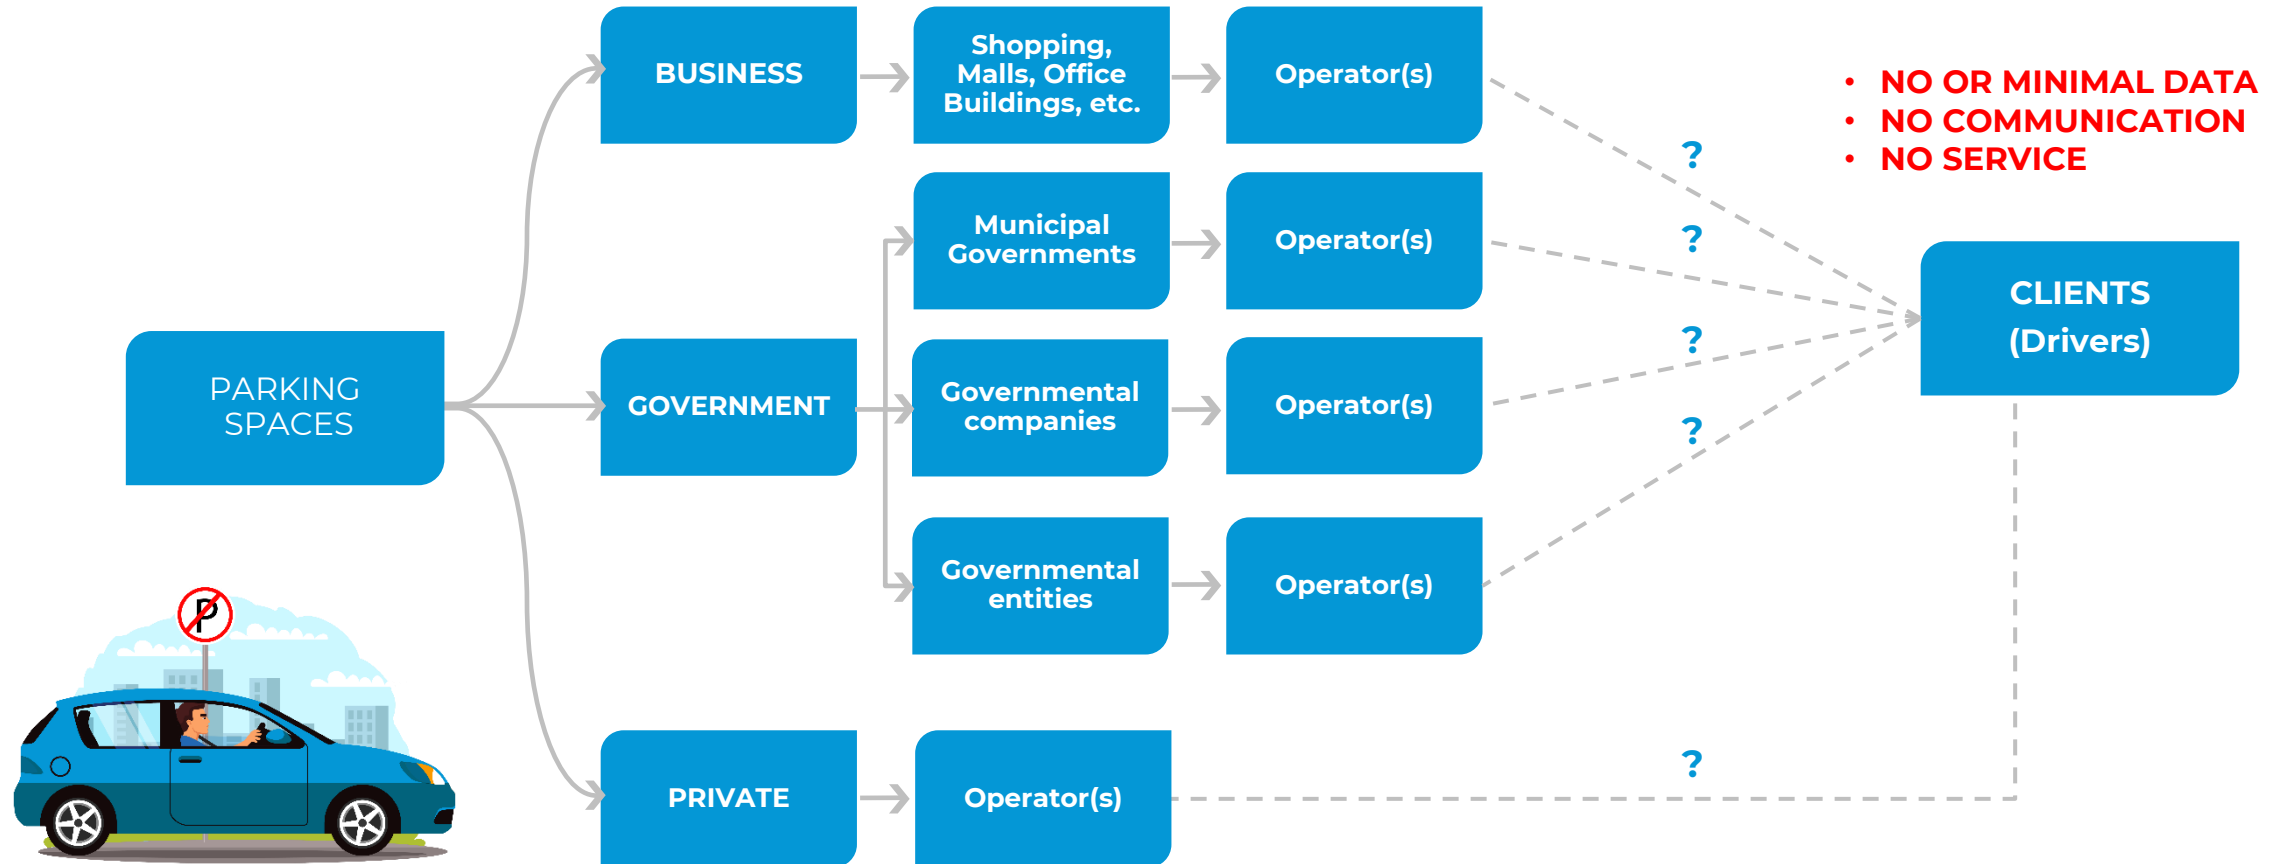

High operation cost

Globally, there's a strong public demand to address the city parking issues.

Current Problems of Parking III.

Customer and Operator issues to be resolved

Fragmented:

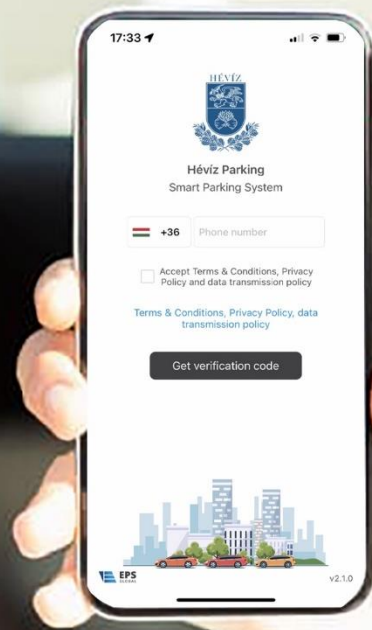

A wide range of parking management and scattered parking resources

No standard:

No unified standard for access and release of parking space information

Integration difficulty:

The current models can not integrate existing parking resources

Our Solution

CityZen

Closed Parking ✓

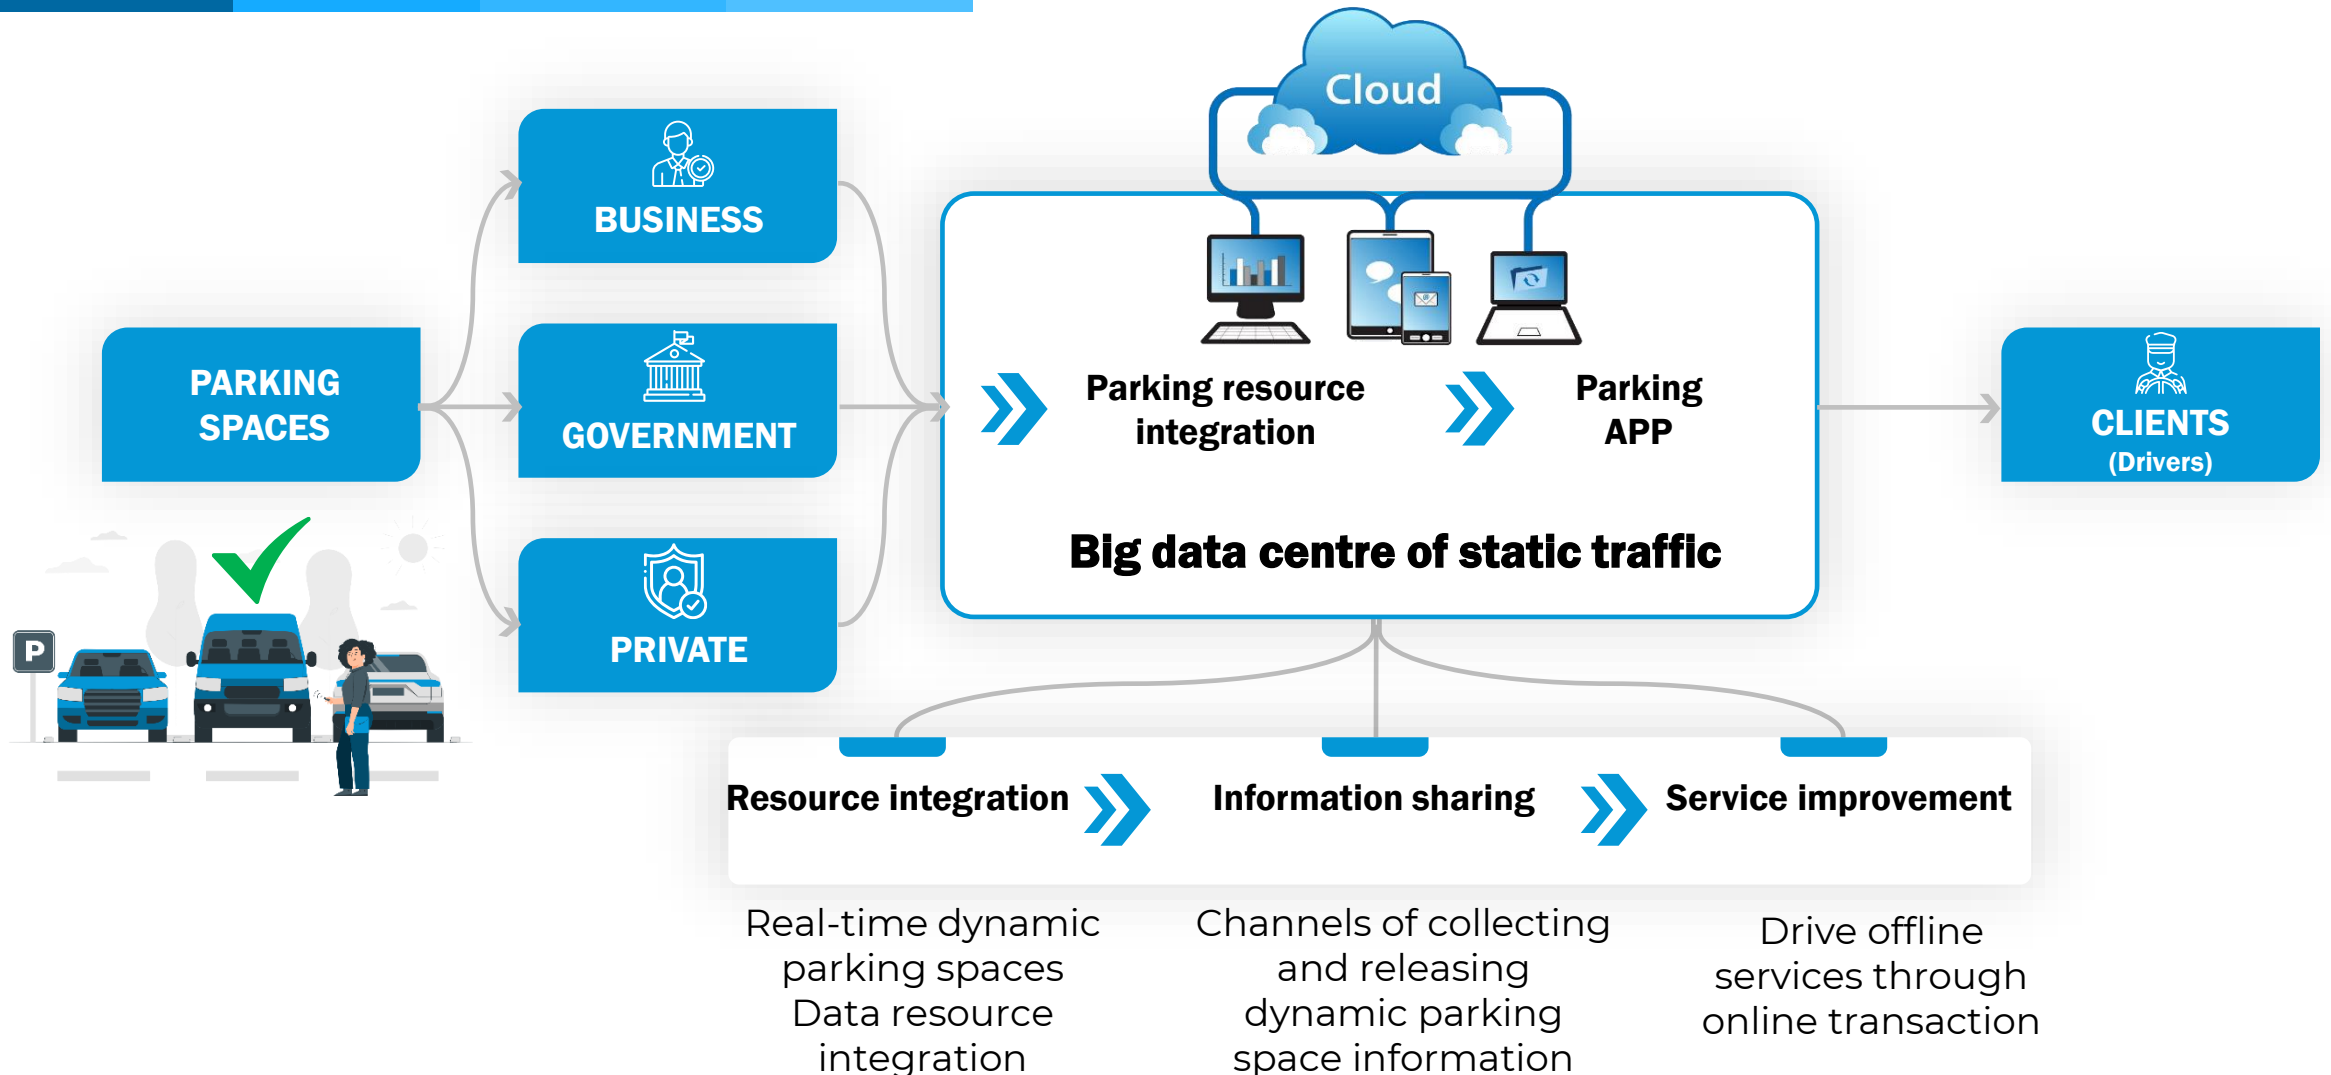

On-Street Parking ✓

Unified Parking System

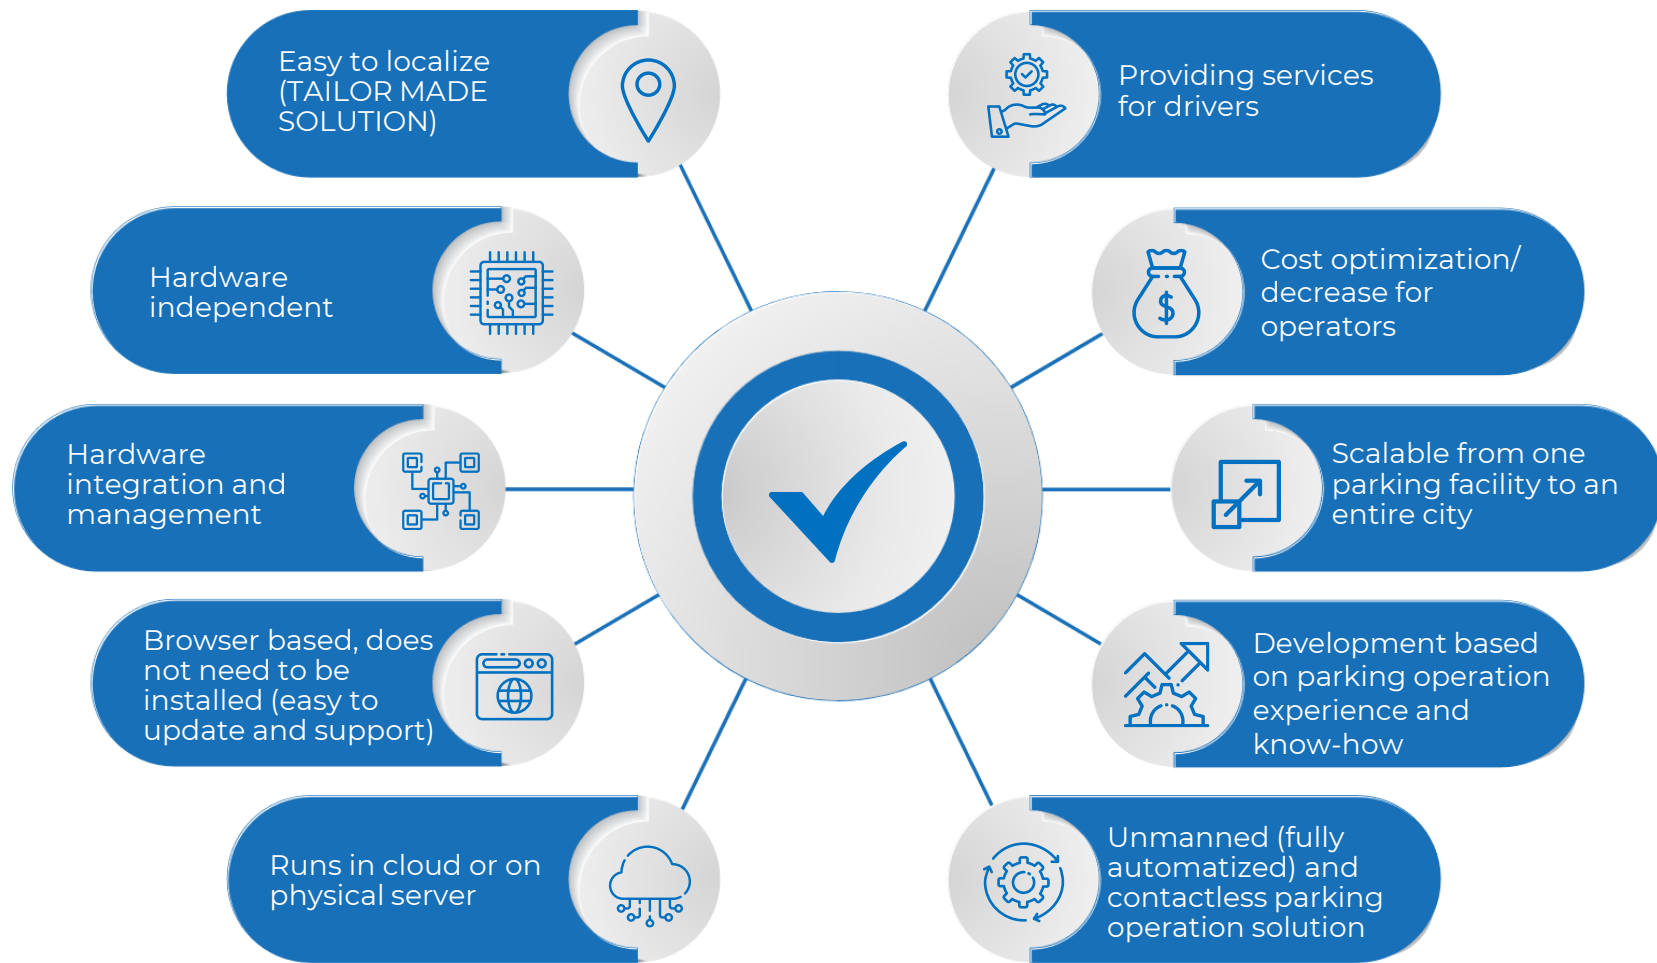

One platform for managing all parking operations

Smart parking cloud service platform

Top Features of CityZen System

ALL-IN ONE (off-street, on-street, enforcement, debt collection) complex and modular smart parking management (ERP) system

C - 84259

Smart Parking Devices

Hardware-Independent Operation

Compatible with existing or new devices, tailored to the customer's specific situation and preferences.

Mobile Apps

iOS and Android Application

Complete parking functions in a user-friendly mobile experience

Our parking software was designed for ease of use and long-term reliability. The mobile app, available on iOS and Android, includes key features such as navigation to available spaces, reservations, and automatic payment with a registered bank card.

Features:

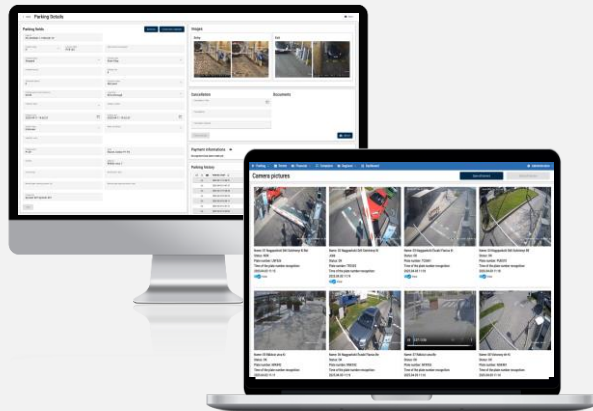

- ✓ Search for a parking lot using a map and also by address
- ✓ Interactive display of parking spaces and occupancy on the map
- ✓ Start-stop and post-paid parking with automatic payment
- ✓ Indication of active parking status, with current fee
- ✓ Automatic entry and payment for off-street parking lots
- ✓ Automatic parking stop upon exit
- ✓ Submit complaints and receive responses through the system
- ✓ Manage multiple license plates
- ✓ Support for various vehicle types (standard, electric, oversized, etc.)
- ✓ On-demand payment options: Alipay, WeChat Mini Program, card registration for bank payments, etc.
- ✓ Parking space reservation
- ✓ Simple SMS-based registration
- ✓ Unlimited potential for feature expansion

Remote Software Management and Operation

At EPS Global, we manage parking systems across multiple countries, leveraging our robust local partnerships, while our software development and operational hub is situated in Europe. With our vast expertise, we are fully equipped to oversee software operations and tasks globally on a daily basis when required. **In 2024, our systems processed more than 9 million parking events and automatically handled more than 3 million barrier openings.**

Budapest, Hungary

We have implemented a smart parking system in a closed parking lots of Budapest city, III. district.

St John's Hospital, Hungary

In St John's Hospital, we have implemented an intelligent parking system in several enclosed car parks. Our system meets all emergency access and individual requests.

Brasov, Romania

We have delivered a smart parking system of 979 pcs geomagnetic sensors, 14 gateways and software.

Szeged University

We have implemented the smart parking system for SZTE University, one of the largest and top universities in Hungary.

Hévíz, Hungary

Since its introduction in 2022, our smart parking system has greatly boosted the municipality's parking revenue, showcasing its effectiveness in improving both financial sustainability and urban infrastructure.

Eleven Shopping Mall

We have delivered the smart parking system for the Eleven Center Shopping Mall in Budapest, XI. district

Yangzhong, China

We have deployed a city-wide smart parking system in Yangzhong city for over 2500 parking spaces, incorporating on-street and off-street parking solutions. The successful implementation of this project was managed by our European headquarters.

Chifeng, China

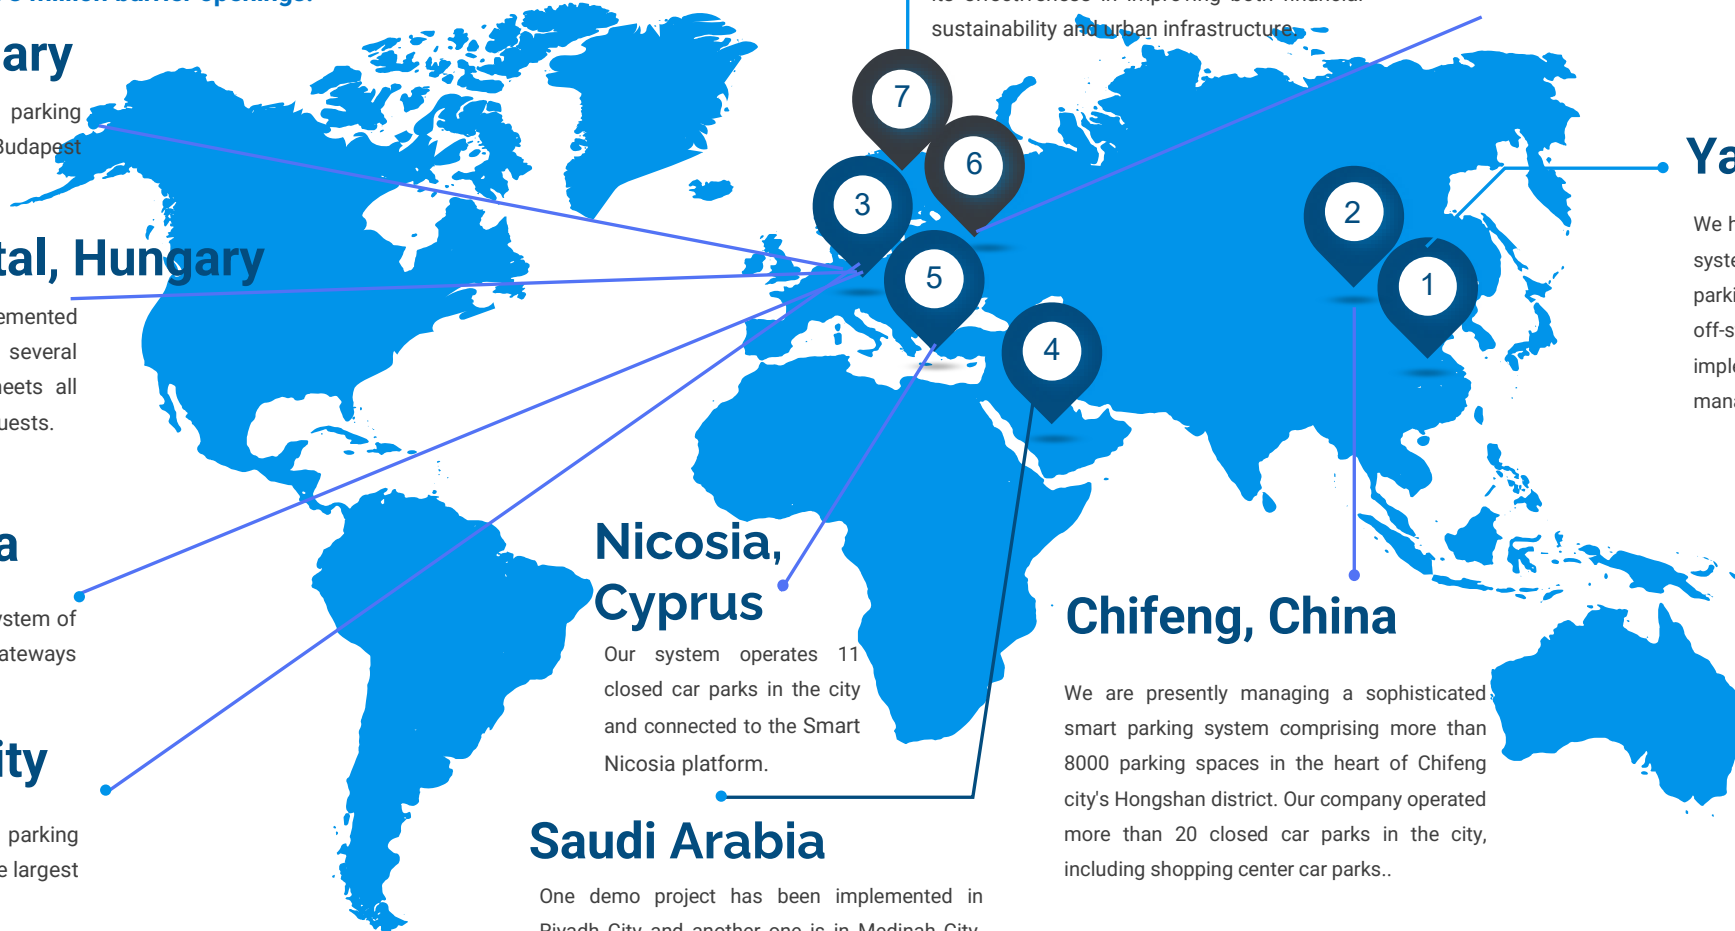

We are presently managing a sophisticated smart parking system comprising more than 8000 parking spaces in the heart of Chifeng city's Hongshan district. Our company operated more than 20 closed car parks in the city, including shopping center car parks..

Nicosia, Cyprus

Our system operates 11 closed car parks in the city and connected to the Smart Nicosia platform.

Saudi Arabia

One demo project has been implemented in Riyadh City and another one is in Medinah City. The parking sensors data is collected, transformed and uploaded onto the Nokia Smart City Platform.

companies of EPS Global**

Reference Project

Municipal Government of Hévíz City, Hungary

The Project

Project Highlights – 2021 H2 Public Tender

Delivery of Smart Parking System (hardware and software), support and maintenance services

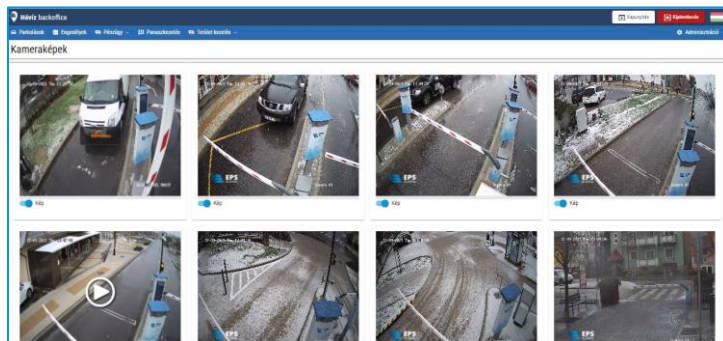

Completed in 5 months:

- 2 touch-less parking lots with 350 parking spaces
- 12 entry/exit lanes, 4 terminals
- 400 public spaces with 10 parking meters, 2 LED displays

Parking Revenue Growth: Year 1: +35%, Year 2: +60%

Comprehensive Parking ERP System:

- Full operation support (electronic payments, AI-powered LPR, penalty management)
- iOS & Android apps
- Hardware integration, dashboard
- Multilingual (4 languages)

Reference Project

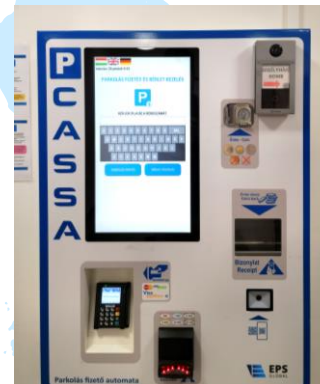

Eleven Center Shopping Mall, Hungary

The Project

Eleven Center – Controlled Access, Closed Parking System

- Solved uncontrolled long-term parking, improving availability for tenants and shoppers
- Deployed CityZen system for 240 spaces with LPR, barriers, mobile app, and payment kiosks
- Fully ticketless entry via license plate recognition
- Custom permits for 24/7 and night tenant access
- Payment by license plate at kiosks or in-app
- Remote management and real-time monitoring for efficient operation

Reference Project

University of Szeged, Hungary

The Project

University of Szeged – Smart Parking System

- 4 sites, 880 closed parking spaces
- LPR access, optional RFID, multi-zone payment
- 9 kiosks, LED barriers, sensors, cameras, intercoms
- Central control with real-time monitoring and remote management
- Mobile payments, violation logging, and manual override supported

Collaboration Opportunities

Target audience

For Whom is it Beneficial?

- Municipalities
- Real Estate Developers
- Parking Operators (shopping malls, commercial properties, hospitals, airports, universities and colleges, stadiums and arenas, hotels, residential, retail properties)
- Smart City Platform Providers

Benefits

Key user benefits

For Operators

- *Optimized Parking Management*
- *Increased Parking Revenue*
- *Decreased Operating Costs*
- *Data-driven Automation*
- *Reduced Traffic Congestion*

For Drivers

- *Data-driven Guidance*
- *Reduced Time and Fuel Consumption*
- *Enhanced User Experience*
- *Additional Services*
